(54) Title: ROLLER BEARING

(57) Abstract: A roller bearing (10) comprises a plurality of bearing rollers (12) located between confronting bearing surfaces (16, 19), said bearing surfaces being rotatable one relative to the other about the rotational axis of the bearing, and said bearing comprising biasing means (18) which provides a force acting in a direction between said confronting bearing surfaces (16, 19) whereby, under all load conditions for which the bearing is designed for use, each bearing roller is retained in contact with each of said confronting bearing surfaces.
